Summary

C++ Systems Engineer specializing in **multithreading, networking, and Windows internals**, with experience building **low-latency, high-throughput client systems**. Strong foundation in **concurrency, IPC, and distributed communication patterns**.

Education

Dr B R Ambedkar National Institute of Technology

Aug 2019 - July 2023

Bachelor of Technology - Information Technology

Technical Skills

Programming Languages: C++, C, Python, Java, C#

Systems & Low-Level: Win32 API, COM, Multithreading, IPC, OS Internals

Backend & Networking: REST APIs, WebSockets, TCP/IP, TLS/SSL, SQLite

Frameworks & Libraries: STL, GTest, POCO, PyTest

Tools & Build Systems: CMake, Vcpkg, MSVC, Git, Jenkins, Visual Studio, VSCode

Debugging & Profiling: WinDBG, ProcMon, Wireshark, SysInternal Tools

Core Concepts: Data Structures & Algorithms, Low-Level Design, System Design, Networking, Operating Systems

Experience

Software Engineer, Zscaler

Aug 2024 – Present, India

- Designed a **high-performance C++ event delivery framework** enabling real-time security updates across clients
- Integrated **SQLite (C++)** as an **in-memory data layer** for notification workflows, enabling **low-latency local persistence**
- Distributed as a **vcpkg-managed library**, ensuring modularity, versioning, and independent integration
- Built **low-latency bidirectional communication** between native **Win32 host** and WebView UI using HostObjects
- Implemented **persistent WebSocket communication over TLS**, reducing polling overhead and lowering update latency
- Developed **non-blocking workflows using modern C# (async/await, Task-based model)**, eliminating UI thread blocking and improving responsiveness
- Revamped App UI using **WinUI3 + MVVM architecture**, designing **asynchronous view-model interactions** and scalable UI abstractions
- Improved system modularity and testability using **dependency injection and factory patterns**

Associate Software Engineer, Zscaler

Aug 2023 – Aug 2024, India

- Migrated **blocking RPC** to **asynchronous RPC**, reducing UI thread blocking and improving responsiveness under load
- Developed **multithreaded C++ components** using atomics and lock-free techniques, improving throughput in concurrent workflows
- Diagnosed and resolved production crashes via **WinDBG and dump analysis**, improving client stability across releases
- Automated regression workflows using **PyTest**, reducing manual testing effort by **25 %**
- Delivered optimized modules using **modern C++ (STL, RAII, concurrency primitives)**

Software Engineer Intern, Zscaler

Feb 2023 – Aug 2023, India

- Increased unit test coverage from **10% to 35%** using **GTest** for C++ codebase
- Built Windows UI components using **C#, WPF, XAML**
- Worked with **Windows APIs and asynchronous programming models** in C#

Projects

Concurrent Task Scheduler | Modern C++, Multithreading, Atomics

[Code](#)

- Engineered a **thread-pool task scheduler with priority-based scheduling (4-level priority queue)**, processing **40K+ tasks/sec** with **3.75× speedup on 4 cores**
- Implemented **lock-based synchronization (mutexes, condition variables, atomics)** with **sub-microsecond submission latency (~0.41 µs/task)** and near-zero scheduling overhead
- Designed **graceful shutdown with deadlock-free teardown**, leveraging **RAII resource management** and polymorphic task execution

Achievements & Awards

- **LeetCode Knight (Top 6%)** - Peak rating ~1850
- **Open Source Contributor** - Canonical Mir display server, worked on various modern cpp improvements, resolving bug fixes and adding unit tests
- **Zscaler Spot Award** - Recognized for design contribution and delivering high quality code for notification framework.
